

Airthings Announces Next-Generation Digital Radon Detector to Meet Growing Demand

OSLO, NORWAY & LAS VEGAS, NV - (January 7, 2025) – **Airthings, today launched Corentium Home 2, the next generation of its market-leading digital radon detector.** This new device is an all-new, smarter version of its award-winning favorite Corentium Home, the most trusted digital radon detector in the world. Upcoming app features will provide people with easy access to radon levels in their homes as well as advice on how to reduce risk.

CES attendees can preview Corentium Home 2 and the upcoming user experience in person at Airthings Booth #54203 at the Venetian Expo in Las Vegas from January 7-10.

Radon is a [leading cause of lung cancer](#) for nonsmokers and responsible for more than 21,000 deaths every year in the United States alone. Although public awareness of radon-related risks has increased in recent years, three out of four Americans have never tested their home for radon, according to an [SSRS survey](#).

“You can’t see or smell radon. Everyone should test their home to know if radon poses a threat to you or your family. We believe that radon detection can save lives,” said Emma Tryti, CEO of Airthings, a global market leader empowering people to breathe better at home, at school and at work.

Growing demand

Airthings, a Norway-based health tech firm, experiences a growing demand for air monitoring solutions as people everywhere are becoming more aware of the quality of the air they breathe.

“As the awareness of indoor air quality is growing, with [new studies](#) being done around radon the market is becoming increasingly competitive. Corentium Home 2 is the latest example of our ability to continuously innovate and improve our offerings to protect and grow our global market leadership position,” Tryti said.

More than half a million homeowners have purchased Corentium Home, Airthings’ first radon detector. The product has received high-quality reviews across all markets. In addition to monitoring radon, temperature and humidity, the new Corentium Home 2, delivers more value. The detector is built on an improved sensor technology (developed by Airthings engineers), offering even more reliable data than the first version. The device connects to the Airthings app, providing real-time status of radon levels and other insights, such as a comparison of radon levels in your neighborhood. In addition, the app will offer personalized advice on how to mitigate the risk.

Airthings Corentium Home 2 will be available for purchase in Q2 2025. A suite of new radon insights and features will be available to all Airthings app users throughout 2025, and will create healthier indoor air quality at home, at school and at work by helping people understand their radon risk, and how to mitigate it. To learn more about Corentium Home 2 and to find additional resources and information about how to stay safe from radon and other indoor air quality pollutants, visit the [Airthings website](#).
