AIRTHINGS

WHAT IS RADON?

- Radon is an invisible, odorless, radioactive gas found in every home.
- Radon is the leading cause of lung cancer among non-smokers.
- Radon is responsible for nearly 21,000 deaths in the U.S. every year; 6 times more than house fires and carbon monoxide combined.
- Radon levels fluctuate daily. Continuous monitoring is the only way to know your exposure and risk.

Airthings makes affordable, continuous radon detectors for your home, enabling you to protect your family from long term exposure every day.

EVERY HOME SHOULD HAVE A RADON DETECTOR
